The proper planning, analysis, and control of funds has a significant influence on the jobs of organization members, the survival of the organization, and the growth of the economy. For example, the financial decisions concerning the profitability of investment in capital equipment influence the degree to which labor resources are needed in the firm. The financial decisions concerning the adoption of new products, the addition of a new plant, and the floating of a bond or stock issue influence the vitality and survival of the organization. The degree to which funds are efficiently allocated within the firm determines the rate at which the economy can grow. Students will learn to apply the
tools and concepts of the financial manager to their own careers. In addition, students will be better informed citizens as they view the activities of the financial world.

COURSE OBJECTIVES:
1. Understand the role of the financial manager and the trade-off between risk and return on investments.
2. Understand and apply the methods which a financial manager uses to prepare the external and internal financial analysis.
3. Understand and apply capital budgeting techniques.
4. Plan an optimal financial structure.
5. Can understand the advantages and disadvantages of alternative sources of short-term and long-term funds.
