GOVERNORS STATE UNIVERSITY
College of Business and Public Administration

Course Title: Principles of Microeconomics
Instructor: Dr. Donald Miller
Course Number: ECON 301B
Credits: Three
Trimester: WINTER TRIMESTER 1999
Description: Study of price formation, demand and production decisions, examines the individual and inter-related behavior of consumers, firms and industries.
Prerequisites: None
Restrictions: None

A knowledge of economics is essential for a proper understanding and appreciation of the society in which we live. Economic events permeate our social, political and cultural environment. Unfortunately, relatively few recognize the importance of understanding our economic system and economic ignorance is the rule. Without economic education how is it possible for the citizen to make those decisions at election time regarding stands on such issues as inflation, unemployment, wage and price controls, “excess” profits, tax level changes and government spending level changes, and the effects of the national debt?

More generally, a knowledge of economics can contribute to an understanding of the causes of the otherwise mysterious happenings just mentioned and thereby to a greater security of mind.

Economics may also be studied for its practical value in the business world. It can aid the business person to better understand the internal and external factors affecting business operations involving supply and demand, choice of inputs, the level of production, prices, wages, profits, competition, labor relations and the impact of government regulations and expenditure.

Intended Audience: Juniors and Seniors
Topical Outline:

Chapter 1  Economics: The Study of Scarcity
Chapter 2  Scarcity in a World in Transition
